

## **Story - 6:**

What Is The State of Food Security and Nutrition in the US

CLASS DATA 608

UMAIS SIDDIQUI

# Child Food Insecurity vs. Childhood Poverty

### Key Insights

The chart reveals a strong, positive correlation between child food insecurity and childhood poverty: as food insecurity rates rise, so do poverty rates. Communities with lower median household incomes and lower high school graduation rates are disproportionately impacted.

Graduation rates are bucketed as Low ( $\leq 75\%$ ), Medium (76-85%), and High ( $> 85\%$ ):

- Purple edges highlight the lowest graduation regions
- Amber edges mark medium rates
- Teal edges show high performing areas.

### Urgency of Action

Child food insecurity is not just a symptom of poverty—it is a driver of long-term economic and health hardship. Without immediate intervention, children facing food insecurity today are at greater risk of malnutrition, starvation, poor educational outcomes, and reduced future earning potential.

### Call to Action

Addressing child food insecurity aligns directly with the Senator's priorities of promoting economic stability and educational opportunity. By investing in policies that ensure children have consistent access to nutritious food, we can break the cycle of poverty and secure a stronger, more equitable future for all Americans.
